

#### Observations

1. Built in 1971 and designed by Walker & McGough
2. Front facade is primarily constructed of concrete
3. One open bay on upper floor on either side of the front facade
4. Appears to be a flat roof with metal along the edge. This is likely for waterproofing
5. Southwest facing front facade. Probably gets a lot of sunlight during the day
6. The front facade slants towards the top of the windows on the upper floor, and slants towards the openings on the bottom floor
7. Two windows per bay, and each window has three panes. Windows do not appear operable
8. Example of Brutalist architecture that references the rhythm of the facade of Suzzallo Library adjacent to it on the red square.
9. There is a sense of symmetry in its façade, with evenly spaced windows and architectural elements that create a visually harmonious composition.
10. Overall the design and color scheme blends well with the surrounding paved walkways.
